

## Residential Telephone Line

### Block-the-Blocker

This feature allows you to reject calls that do not show the incoming call number. Rejected calls will be diverted to a standard message which is in English, Cantonese and Putonghua, informing the callers that you do not want to answer anonymous calls. The message will then tell the callers to try to call you again and advise them to skip "133" or press "1357" before redialing if the call is from a "Per Line Blocking" line.

Users could enter a short code to activate or deactivate Block-the-Blocker.

#### To Activate Block-the-Blocker :

##### Steps to follow

Lift the handset  
Key in \*76  
Hang up

##### What you hear
