

Residential Telephone Line

Duplex Ringing

Duplex Ringing is an ideal device for those who have two different numbers for one telephone line. Each number has a unique ringing tone to distinguish the nature of the calls such as, voice or fax, local or international, personal or business.

Telephone Number	What you hear
Primary number	Two short bursts with silence between the cycles
Secondary number +	One long burst with silence between the cycles

+ No advanced voice features can be applied on the secondary number except Block-the-Blocker.
