

# Data Protection for the Cloud Era

Microsoft 365 is a foundational product for many organizations, but there is often a misunderstanding when it comes to its inherent backup limitations. That is why it's critical for IT teams to ensure you have the right tools and solutions in place to prevent Microsoft 365 data loss — especially in the event of a ransomware, security breach, accidental erasure, or challenging legal compliance and file search scenarios.

## Top 5 reasons why Microsoft 365 users need Druva services

- ✓ Microsoft 365 data is prone to user error
- ✓ Ransomware prevention is not enough
- ✓ Data retention gaps risk non-compliance
- ✓ File search and legal hold functionality falls short
- ✓ Internal threats increase data risk

## All-inclusive cloud data protection solution

An all-inclusive cloud data protection solution should address the above challenges for all user data regardless of where it is located. HGC provide a cloud-based data protection service, ranging from backup / recovery to providing cyber resilience. HGC and Druva offer a SaaS platform for data protection across data centers, cloud applications, and endpoints. Securely backup and recover data with the scale and simplicity of the public cloud

## Your Benefits

- ✓ 0% infrastructure, 100% cloud
- ✓ Backup and recovery to ensure a clean copy of data is always available
- ✓ Reduce TCO by up to 50%
- ✓ Management via a unified intuitive interface
